**Re: Wetland Boundary Verification
Application #IWW/M-11038-20
5 Vineyard Lane, Westport, CT**

Alicia:

I have reviewed the flagged wetland boundary shown on the 'Plot Plan prepared for Robert H. Steinmetz & Lorraine J. Steinmetz, 5 Vineyard Lane, Westport, CT' prepared by Leonard Surveyors LLC and dated July 10, 2013 as well as the 'Soil Investigation Report' for same property dated March 28, 2013 by Otto Theall.

I conducted a site visit on August 12, 2020 and found the wetland boundary to be accurate as well as the soil types described by Otto Theall. The wetland is Walpole sandy loam (3) some areas with shallow fill and the upland is Udorthent-Urban land complex (306). Soil samples were taken with an auger for visual inspection.

The wetland flag locations were numbered and staked at the time of the site visit.

Sincerely,

Mary Jaehnig
soil scientist
